

Pickleball Round Robin

Release Notes — Version 2.0

Version 2.0 brings together a round of clarity and usability work: a redesigned ranking card, downloadable game history, track cleanup, and a fuller in-app Help section.

Clearer ranking card

The old card showed two different percentages with no explanation. It's been rebuilt so the score explains itself:

- Line 1: Games · Win–Loss · Win bonus
- Line 2: Total points scored · Points per game · Point differential (green when positive)
- Line 3 (highlighted): the actual math — $(\text{points scored} + \text{bonus}) \div \text{points possible} = \text{score \%}$.

The duplicate “% of pts” is gone, and points-for/against are now captured by a single differential number. One percentage on the card, and it shows where it comes from.

Download game history

Download the actual game-by-game results — every round, who played whom, and the scores — as a spreadsheet file. Available for this session, this track, or all tracks on the Rankings tab, and per-session from each saved session in History. Sessions saved before this feature show standings only, with a note.

Delete a track (cleanup)

Remove a track you no longer need: tap the active track at the top, then choose delete. To protect your records, a track can only be deleted when it's empty — if it still has saved sessions, the app tells you to clear its history first. The app always keeps at least one track.

Help & plain language

A Help tab with a how-it-works overview, a description of every tab, and a plain-language Definitions list — covering the new card, game history, differential, and track deletion. Small “?” explainers sit next to the less-obvious things around the app. Plus a general plain-language pass on labels and wording.

Reliability

Saving a session is now protected end-to-end: if anything in the data ever trips it up, the app tells you what happened and keeps your scores safe, instead of failing quietly. Saving was also hardened against unusual data shapes.

Quality check

Tested in a simulated browser by actually clicking through it: the new card and equation, game-history download from both the live session and saved sessions (including the older-session fallback), track deletion (blocked with history, allowed when empty, last track protected), and ending a session. Then the full regression across round generation, scoring, rankings, head-to-head, history, editing saved sessions, ratings, sit-out persistence, and device transfer. All checks passed.

Your existing data, players, and settings carry over untouched. Title shows 2.0. (This is the next release after the 1.x line.)
