

Pickleball Round Robin

Release Notes — Version 2.0 (everything since 1.9)

Version 2.0 gathers a season's worth of improvements into one release — clearer rankings, friendlier help, downloadable and viewable game history, saved-session tools, and reliability fixes. Highlights below, grouped by area.

Rankings card — redesigned and clearer

The player card was rebuilt so the score explains itself, replacing the old confusing pair of percentages:

- Line 1: Games · Win–Loss · Win bonus
- Line 2: Total points scored · Pts/game · Differential · Diff/game (per-game point margin)
- Line 3 (highlighted): the actual math — $(\text{points scored} + \text{bonus}) \div \text{points possible} = \text{score \%}$.

The duplicate “% of pts” was removed; point differential (and now differential per game) capture margin instead. Differentials show green when positive, red when negative.

Game history — download, copy, and view

See and export the actual game-by-game results — every round, who played whom, and the scores. Download as a spreadsheet file or copy to the clipboard, for the current session, a whole track, or all tracks. Sessions saved before this feature show standings only, with a note.

Saved sessions — full tools from History

Each saved session in History now opens its complete rankings view (the redesigned cards, sorting, and tap-for-head-to-head) and its head-to-head — not just a copied text table as before. Per-session game history download/copy and score editing are available right from the row. Row buttons are labeled plainly: Games download, Games edit, Rank, H2H, and delete.

Edit saved sessions & player ratings (from 1.9)

Saved sessions can be reopened and their scores corrected (“Games edit”). Players can carry an optional rating (e.g. 3.5) shown on chips and rows, with a sort-by-rating option — for reference; it doesn't change how games are made.

Track cleanup

Remove a track you no longer need: tap the active track, choose delete. To protect records, a track deletes only when empty — if it still has saved sessions, the app asks you to clear its history first. At least one track is always kept.

Help & plain language (from 1.10)

A Help tab with a how-it-works overview, a description of every tab, and a plain-language Definitions list — covering the card, game history, differential, ratings, tracks, and more. Small “?” explainers sit next to the less-obvious controls. Labels and wording were simplified throughout.

Reliability

Saving a session is protected end-to-end: if anything in the data trips it up, the app reports what happened and keeps your scores safe instead of failing quietly. Saving was also hardened against unusual data shapes. (Earlier fixes also resolved a benched-player swap issue and made sit-outs persist correctly across save/load and transfer.)

Quality check

Each piece was tested in a simulated browser by clicking through it — the new card and equation, differential per game, game-history download/copy/view, saved-session rankings and head-to-head, editing saved sessions, track deletion (blocked with history, allowed when empty, last track protected), and ending a session — followed each time by a full regression across round generation, scoring, rankings, head-to-head, history, ratings, sit-out persistence, and device transfer. All checks passed.

Your existing data, players, and settings carry over untouched. Title shows 2.0. (Note: an in-app “Recap” summary was built during this cycle and then removed at your request; it is not part of 2.0.)
