

Pickleball Round Robin

Release Notes — Version 1.5

New in v1.5

Points Possible is back, as its own column. Rankings and exports now show **Pts Possible** (games × the game target), alongside Pts For and Pts Against.

Two percentages, each meaning something different:

- **% of Pts** = your points ÷ all points played in your games (for + against). Always 0–100%.
- **% of Possible** = points for ÷ points possible. Can go over 100% when games run past the target in overtime — that's expected.

Both percentages and the possible total carry into the cumulative views (this track and all tracks).

Locked game target. Once you generate the first round of a ladder, its “games to” target locks, so Points Possible stays consistent for the whole ladder. To use a different target, start a new ladder with the + button. (Rec games still set their target per game.)

“Clear data” on every track. Each track (Ladder, Rec, and any you add) has a Clear data button. It asks “Are you sure you want to clear data?”, saves the current session to History first, then resets that track's current session and setup so you can start fresh. Your saved players and all History are kept. The old carry/reset prompt has been removed.

Delete individual saved sessions. History now has a X on each saved session to delete just that one, in addition to “Clear this track's history” for all of them. Both ask before deleting.

How a season works

A **track** is one ladder; each time you play is a **session** saved to that ladder's History. To start a brand-new ladder (everyone back to zero, new setup) while keeping the old one intact, tap + to create a new track. The previous ladder stays whole in its own track, and “All tracks” still combines everything.

Quality check

Ran the full regression suite twice (all 22 checks green both times) plus 23 targeted checks for the new features and 6 real-world flow tests — including a multi-week ladder cleared between weeks, overtime pushing % of Possible over 100%, both percentages carrying into cumulative and all-tracks views, target staying locked through a clear, and the empty-session guard that avoids junk History entries. All passed.

Your saved players, tracks, and history all carry over — nothing to redo.
