

Pickleball Round Robin

Release Notes — Version 2.2

Three improvements to sorting and filtering on the Rankings and head-to-head screens.

Head-to-head now sorted by record

When you tap a player to see their head-to-head, both lists — opponents and partners — are now ordered by record, best first. Someone you're 3–0 against ranks above someone you're 2–1 against. Ties break by win rate, then by point margin.

Sort rankings by any card stat

The “Sort by” row now includes every number shown on a player's card: Score %, W–L, Total pts, Tot pts scored, Pts/game, Differential, Diff/game, Win bonus, % of pts, and Games. Tap any chip to re-rank the list by that stat.

Filter rankings by games played

A new “Show” row lets you hide players below a games-played threshold — handy for focusing on regulars and ignoring people who only played once or twice. Choose All, ≥ 3 , ≥ 5 , ≥ 10 , or Custom (type your own number). It only changes who appears on the list; it never changes anyone's stats. The filter resets when you leave the Rankings tab.

Quality check

Verified in a simulated browser by clicking through it: every new sort chip re-ranks without error, the games filter correctly hides and restores players (including a custom number), and head-to-head opponents/partners come out ordered by wins. Then the full regression across round generation, scoring, rankings, head-to-head, history, saved-session tools, ratings, sit-out persistence, and device transfer. 43 checks in total, all passed.

Your existing data, players, and settings carry over untouched. Title shows 2.2.
