

Pickleball Round Robin

Release Notes — Versions 2.0 through 2.4 (newest first)

Version 2.4

Alphabetical sorting, and reports that match your view

Sort rankings A–Z

A new A–Z chip orders players alphabetically by name. Like the other sort chips, it changes both the on-screen list and any PDF or CSV generated while it's selected.

Reports mirror your view

PDF and CSV now reflect exactly what's on the Rankings screen — both the chosen sort and the games-played filter. (Previously the sort carried through but the filter didn't.) Each report prints a short line noting the active sort and, when a filter is on, e.g. “Showing only players with 5+ games.”

Head-to-head in alphabetical order

In every PDF and CSV, head-to-head now lists each player's block alphabetically. Within each block, opponents and partners remain sorted by record (best first).

Version 2.3.2

PDF “stuck screen” fix

Tapping PDF previously opened a separate page with no way back when the app runs from the Home Screen. The report now opens as a panel inside the app with “< Back to app” and “Save as PDF / Print” buttons; printing sends only the report, not the app around it. Applies on Rankings and on each saved session in History.

Version 2.3.1

Report layout refinement

Removed the separate Ratings section and the standalone rating column (redundant). The Games played & standings columns are now: #, Player, Score %, Games, W–L, Win Bonus, Total Pts Possible, Total Pts Scored, Total Pts Against, Pts/Game, Diff/Game. Head-to-head unchanged.

Version 2.3

Medals, and one reliable report

Medals for 2nd and 3rd

Ranking cards show a silver medal for 2nd and bronze for 3rd, alongside the gold trophy for 1st; everyone below shows their rank number. Medals follow whatever sort is selected.

One report, two formats

The old scattered download and copy buttons were replaced by a single report with two buttons: a PDF (opens a clean printable page — use the device's “Save as PDF” / “Save to Files”) and a CSV (opens in Sheets or Excel). Each contains Games played & standings, Ratings, and Head-to-head, for session, track, all tracks, and per saved session. The print-based PDF keeps the app file lean. The plain CSV export is preserved.

Version 2.2

Sorting and filtering

Head-to-head sorted by record

Opponents and partners are ordered by record, best first (3–0 ranks above 2–1). Ties break by win rate, then point margin.

Sort rankings by any card stat

The Sort row includes every number on a player's card: Score %, W–L, Total pts, Tot pts scored, Pts/game, Differential, Diff/game, Win bonus, % of pts, and Games.

Filter rankings by games played

A “Show” row hides players below a games-played threshold — All, ≥ 3 , ≥ 5 , ≥ 10 , or Custom. It changes who appears on the list only, never the stats, and resets when you leave the Rankings tab.

Also in this line

Differential per game was added to the ranking card alongside the existing differential. The round recommendation was corrected to partner-everyone math ($n-1$ rounds), and setup/Help wording now makes clear the schedule rotates partners first, then opponents.

Version 2.0

The big consolidation (everything from 1.9 on)

Clearer ranking card

Rebuilt so the score explains itself: Games · W–L · Win bonus; then points, points-per-game and differential; then the highlighted math — $(\text{points scored} + \text{bonus}) \div \text{points possible} = \text{score \%}$. The old duplicate percentages were removed.

Saved-session tools & game history

View any saved session's full rankings and head-to-head from History (not just a copied text table). See, download, or copy game-by-game results for a session, track, or all tracks, and per saved session.

Track cleanup, Help, reliability

Delete an empty track (blocked when it still has saved sessions). A Help tab with plain-language definitions and “?” explainers. Saving a session now reports any error instead of failing silently, and was hardened against unusual data. (Editable saved sessions and player ratings arrived in 1.9.)

Note: an in-app “Recap” summary was built during the 2.0 cycle and then removed at your request; it is not part of the app.

Throughout, your data, players, and settings carry over untouched between versions. Every release was tested in a simulated browser (clicking real buttons) plus a full regression across round generation, scoring, rankings, head-to-head, history, ratings, and device transfer. The title bar shows the current version (2.4).
