

Pickleball Round Robin

Release Notes — Version 1.7

What's new

New ranking — Score %. Players are ranked by one fair number: (your points for + win bonuses) ÷ points possible. Example: win all 5 games to 11 = 55 + 5 bonus = 60 ÷ 55 = 109%. Because it's a ratio, playing more games doesn't inflate it — the best per-game player is #1, not whoever played most.

Fixed: empty “Share all stats” file. Sharing stats on iPhone now sends them as text through the Share sheet, so the file is never empty.

Simpler data transfer. The Transfer tab is now built around a backup file: one button to save, one to load. (A transfer-code fallback is tucked under “If the file won't open.”)

How to share data between devices

Everything — all tracks, players, sessions, and history — moves at once. You can do this anytime, even before any scores are entered.

On the device that HAS the data:

1. Open the **Transfer** tab.
2. Tap **Save backup file**.
3. On Mac it saves to Downloads — then AirDrop or email it to the other device. On iPhone the Share sheet opens — pick AirDrop, Messages, or Mail.

On the device that NEEDS the data:

4. Open the **Transfer** tab.
5. Tap **Choose backup file** and pick the file you received (look in Downloads, Files, or the AirDrop/message it arrived in).
6. Confirm. The data loads, replacing what was on that device (a safety copy is saved first — there's an **Undo last load** button).

If the file won't open (iPhone to iPhone)

iPhones are sometimes fussy about opening a received file. If that happens, use the fallback: on the Transfer tab open “**If the file won't open**”, tap **Copy transfer code** and send that text (Messages/AirDrop). On the other phone, open the same section, paste into the box, and tap **Load from code**.

Good to know

Each device keeps its own data — there's no automatic sync. Treat one device as the “live” one at a time and transfer when you hand off, so two people don't enter scores separately. If you load a backup that's older than what's on the device, the app warns you first.

To confirm you're on this version, the title shows v1.7.
